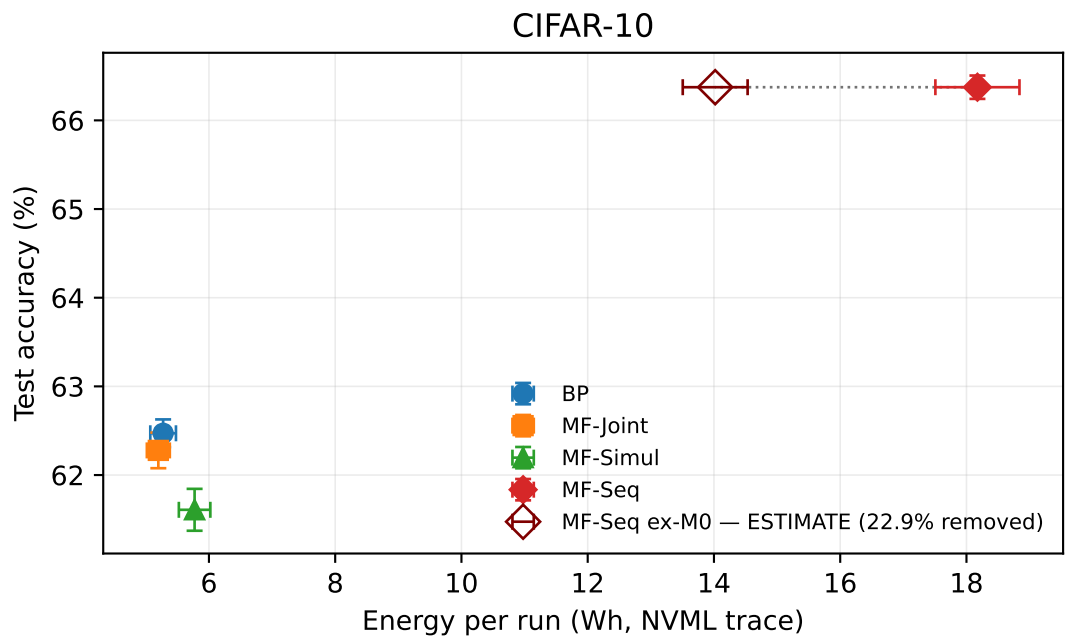
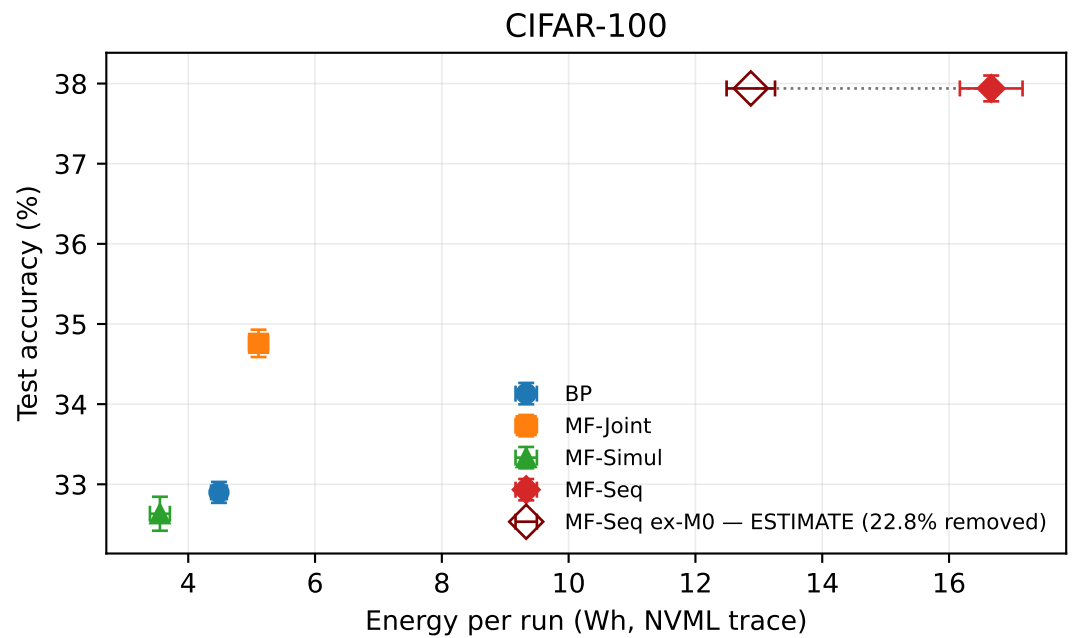
# Protocol A (G1, seeds 42–61): accuracy vs energy — ex-M0 is an estimate

Open diamond: measured MF-Seq energy × (1 − M0 share); accuracy assumed unchanged (M0 is dead compute). Protocol A applies the PPAM-era M0 share, so it is era-mixed.





Sources: G1 2026-10 (Protocol A) and PPAM 2026-09 (Protocol B, M0 share). No W1 data.
